GOOSENECK MOUNTING KIT
Chevrolet/GMC 2500/3500 Heavy Duty
Short & Long Bed
9465/9475 HIDE-A-GOOSE HITCH INSTALLATION

NOTES:
- This section of instructions refers to installing the 9465 or 9475 head only.
- Always make sure the ball is fully locked before towing.
- Keep the ball and ball sleeve well lubricated.
- Periodically re-torque all the hitch fasteners.
- Check ball, hitch coupler, safety chains and other connections for proper operation every time you tow.

Warning:
- The tow vehicle manufacturers recommended towing capacities should UNDER NO CIRCUMSTANCES be exceeded.
- Check for adequate clearance between the gooseneck trailer and the rear of the cab and the rear of the truck box before installing hitch.
- All trucks have fuel lines, brake lines and electrical wiring located along the vehicle frame where the rail kit installs. Carefully examine the location of fuel lines, brake lines and electrical wires before installation and be certain not to damage these when positioning the hitch components. Be careful when drilling holes, cutting sheet metal and tightening fasteners as to not limit the integrity of these systems.

Hide-A-Goose Only – Drilled hole in bed location (see step 5).
Short Box – 44-1/2 inches
Long Box – 49-3/8 inches

Installation Instructions
1. Lower the spare tire and the exhaust to make installation easier.
2. 2007 New Body Style and later trucks with OE Trailer Brake Control: Relocate the electrical plug that is located on the inside of the driver’s side frame over the rear wheel (Figure 2a). The plug may be removed from the frame by loosening the two bolts on the outside of the frame and pushing the bolt heads through the key hole slots, as shown in Figure 2b. Attach the plug to the angle bracket supplied with the mounting kit. The bracket will be attached to the inside of the frame with a 5/8” bolt at a later step.
3. From underneath the passenger’s side of the vehicle, remove or cut out the section of the heat shield that is located under the bed, above the exhaust, and between the two bed supports, over the axle.
4. Cut the heat shield on the gas tank or bend the top edge about 1” down to make room for the hitch. See Figure 3. On newer models with gasoline engines, temporarily detach the fuel vapor pump from the back of the gas tank.
5. When installing the 9465/9475 Hide-A-Goose hitch, a hole must be drilled in the bed of the truck. Mark and drill a 1/4” hole 441/2 inches (6’ bed) / 49-3/8 inches (8’ bed all 2500 pickups and 2007 “New Body Style” and later 3500 pickups) from the rear of the bed and centered between the wheel wells. Using a hole saw, enlarge the pilot hole to the final diameter hole size. Refer to the 9465/9475 Hide-A-Goose hitch instruction sheet for hole size.

Installation Instructions
GOOSENECK MOUNTING KIT
Chevrolet/GMC 2500/3500 Heavy Duty
Short & Long Bed
9465/9475 HIDE-A-GOOSE HITCH INSTALLATION

Part Numbers:
4434

6a. Placing Cross Members Between Bed And Frame, Method 1: Loosening The Truck Bed. Remove four truck bed bolts (using 18mm socket) completely from the driver’s side frame. The bolts are located on the bottom side of the frame. Loosen, but do not remove, the four bolts holding the bed to the passenger’s side of the frame. Prop up the driver’s side of the truck bed enough to make room for the cross members to fit between the bottom of the truck bed side flange and the top of the frame.

6b. Placing Cross Members Between Bed And Frame, Method 2: Notching the Side Flange. From the passenger’s side wheel well, notch the sheet metal flange as shown in Figure 4a for 6’ beds and Figure 4b for 8’ beds. After notching, the cut steel surfaces should be touched up with paint to prevent rusting.

7. Slide the hitch cross members half way through the notches in the sheet metal flange and place 5/8 carriage bolts from the Hide-A-Goose hitch fastener kit into the long slots on the rearward cross member from underneath the vehicle. Slide the hitch cross members above both vehicle frame rails and align hitch cross members as shown in Figure 6. Note: if the truck bed has been loosened as in step 6a, the hitch can be loosely preassembled to the cross members, and the hitch and cross members can be slid between the truck bed flange and the vehicle frame (see figure 5). The truck bed will need to be propped up on the driver’s side about 3-1/2” to slide the hitch and cross members into position.

All hardware pictured is from Hide-A-Goose Hitch fastener kit

8. Line up the mounting slots on the frame brackets with the threaded studs on the ends of the cross members. See Figure 6 to identify which holes on the frame brackets to use. Loosely attach frame brackets to cross members with 5/8” hex nuts, lock washers and flat washers as shown in Figure 1.
9. Use the U-Bolts to attach the frame brackets to the frame as shown in Figure 1.
10. Loosely fasten the U-Bolts to the frame brackets using the 1/2” nuts and conical washers.
11. Attach the frame bracket to the frame through the slot in the frame using the 5/8” x 2-1/2” bolt, lock washer and nut as shown in Figure 1.
   **Note:** On 2007 “New Body Style” and later pickups with OE trailer brake control, refer to Step 2 to relocate the plug with the angle bracket. Use the 5/8” x 2-1/2” bolt to attach the angle bracket to the inside of the frame.
12. Loosely install the Hide-A-Goose hitch to the rearward cross member. Place 5/8” carriage bolts through the square holes on the vertical leg of the forward cross member and attach the hitch to the horizontal mounting locations (see figure 1 and refer to the Hide-A-Goose hitch instruction sheet).
13. If you loosened the bed in Step 6a, reinstall the bed bolts and tighten all of them.
14. Torque all 5/8-11 GR5 fasteners on the brackets to 150 ft.-lb. (203 N-m) and 1/2-13 GR5 fasteners to 75 ft.-lb. (102 N-m). Torque the 5/8-11 GR8 fasteners attaching the hitch to the cross members to 212 ft.-lb. (287 N-m) Use the following sequence: a) torque frame brackets to the frame of the vehicle, b) torque cross members to the frame brackets c) torque hitch to cross members.
15. Reinstall the fuel vapor pump, exhaust, and the spare tire.

GOOSENECK MOUNTING KIT
Chevrolet/GMC 2500/3500 Heavy Duty
Short & Long Bed
6300/630044/8339 GOOSENECK HITCH INSTALLATION

NOTES:
- This section of the instructions refers to installing the 6300, 630044 or 8339 head only.
- Always make sure the ball is fully locked before towing.
- Keep the ball and ball pocket well lubricated.
- Periodically re-torque all the hitch fasteners.
- Check ball, hitch coupler, safety chains and other connections for proper operation every time you tow.

Warning:
- The tow vehicle manufacturers recommended towing capacities should **UNDER NO CIRCUMSTANCES** be exceeded.
- Check for adequate clearance between the gooseneck trailer and the rear of the cab and the rear of the truck box before installing hitch.
- All trucks have fuel lines, brake lines and electrical wiring located along the vehicle frame where the rail kit installs. Carefully examine the location of fuel lines, brake lines and electrical wires before installation and be certain not to damage these when positioning the hitch components. Be careful when drilling holes, cutting sheet metal and tightening fasteners as to not limit the integrity of these systems.

Installation Instructions
1. Lower the spare tire and the exhaust to make installation easier.
2. **2007 New Body Style and later trucks with OE Trailer Brake Control:** Relocate the electrical plug that is located on the inside of the driver’s side frame over the rear wheel (Figure 8a). The plug may be removed from the frame by loosening the two bolts on the outside of the frame and pushing the bolt heads through the key hole slots, as shown in Figure 8b. Attach the plug to the angle bracket supplied with the mounting kit. The bracket will be attached to the inside of the frame with a 5/8” bolt at a later step.
3. From underneath the passenger’s side of the vehicle remove or cut out the section of the heat shield that is located under the bed, above the exhaust, and between the two bed supports over the axle.
4a. Placing Cross Members Between Bed And Frame, Method 1: Loosen The Truck Bed. Remove four truck bed bolts (using 18mm socket) completely from the driver’s side frame. The bolts are located on the bottom side of the frame. Loosen, but do not remove, the four bolts holding the bed to the passenger side of the frame. Prop up the driver’s side of the truck bed enough to make room for the cross members to fit between the bottom of the truck bed side flange and the top of the frame.
4b. Placing Cross Members Between Bed And Frame, Method 2: Notch the Side Flange. From the passenger’s side wheel well, notch the sheet metal flange as shown in Figure 9a for 6’ beds and Figure 9b for 8’ beds. After notching, the cut steel surfaces should be touched up with paint to prevent rusting.
5. Slide the hitch cross members through the notch(es) in the sheet metal flange. Figure 7 shows the forward and rear rail and the direction to orient each rail.
6. Line up the mounting holes on the frame brackets with the threaded studs on the ends of the rails. See Figure 10 to identify which holes on the frame brackets to use. Loosely attach frame brackets to rails with 5/8” hex nuts, lock washers, and flat washers as shown in Figure 7.
7. Use the U-Bolts to attach the frame brackets to the frame as shown in Figure 7.

8. Attach the frame bracket to the frame through the slot in the frame using the 5/8" x 2-1/2" bolt, lock washer and nut as shown in Figure 7.

   **Note:** On 2007 “New Body Style” pickups with OE trailer brake control, refer to Step 2 to relocate the plug with the angle bracket. Use the 5/8” x 2-1/2” bolt to attach the angle bracket to the inside of the frame.

9. With the cross members and side brackets properly aligned, torque all 5/8-11 GR5 fasteners on the bracket to 150 ft.-lb (203 Nm). Torque 1/2-13 GR5 U-Bolt fasteners to 75 ft-lb. (102 N-m). Also, reinstall and tighten all bed fasteners if they were loosened or removed during rail installation.

10. For 6300/630044 & 8339 use the **outer** edges of the long slots in the rearward cross member as a template to drill 5/8” diameter holes through the truck bed as shown in Figure 11. Due to the fuel tank, not all holes can be drilled from under the vehicle, but should be done later from inside the bed.

11. Align the holes on the template (provided with the gooseneck hitch) with the holes previously drilled through the bed. Be sure that the template is properly oriented toward the front of the vehicle (see Figure 12). Center punch the holes that will be used to cut the opening in the bed. If the vehicle is equipped with a bed liner, a section of the bed liner must be cut away so that the gooseneck platform can contact the bed corrugations.

   **Template p/n 5978 for use with 6300/630044 head**
   **Template p/n 114234 for use with 8339 head**

   **A durable and reusable stainless steel templates is available. A time saver for cutting bed liner and bed.**
   **Template p/n 6425 for use with 8339 head**

   **Figure 12**
12. Drill 1/4” pilot holes (size will depend on width of blade in saber saw).
13. Cut out the truck bed and the bed hat section on short bed models from underneath the bed of the vehicle and file edges as needed.
14. Install the hitch into the opening.
15. Use the hitch as a guide to drill the forward 5/8” diameter mounting holes. Also, drill 5/8” diameter U-Bolt holes if installing a 6300/630044 or 8339 gooseneck hitch.
16. Before installing the 5/8” carriage bolts through the hitch, the U-block shims must be placed between the hitch and the bed and between the cross members and the bottom of the bed. These shims are necessary to prevent the bed corrugations from collapsing when the bolts are tightened.
17. Install the 5/8 X 2.50 GR5 carriage bolts through the hitch, shims and cross members. Secure with lock washers and nuts. Torque nuts to 150 ft.-lb. (203 N-m).
18. **For 6300/630044 and 8339 Installations:** Install the (2) U-bolts through the hitch and from under the vehicle install the large flat washer over the U-Bolt followed by a spring, another large flat washer and secure with a thin 5/8” jam nut. Repeat for the other legs of the U-bolts. The 5/8” jam nuts are tightened until (3) threads are visible past the bottom of the jam nut.
19. Reinstall the exhaust and the spare tire.

**WARNING** The fuel tank and/or other vehicle components are located below some of the holes. A wood or metal shield must be placed between the frame and the fuel tank to prevent puncturing the fuel tank when the drill breaks through the bed.
LIMITED LIFETIME WARRANTY

Part No:_______________________________  Date of Original Purchase:___________

Original Owner:_________________________  Original Installer:____________________

1. Limited Lifetime Warranty (“Warranty”). Cequent Performance Products, Inc. (“We” or “Us”) warrants to the original consumer purchaser only (“You”) that the product will be free from material defects in both material and workmanship, ordinary wear and tear excepted; provided that installation and use of the product is in accordance with product instructions. There are no other warranties, express or implied, including the warranty of merchantability or fitness for a particular purpose. This warranty is not transferable.

2. Limitations on the Warranty. This Warranty does not cover: (a) normal wear and tear; (b) damage through abuse, neglect, misuse, or as a result of any accident or in any other manner; (c) damage from misapplication, overloading, or improper installation; (d) improper maintenance and repair; and (e) product alteration in any manner by anyone other than Us, with the sole exception of alterations made pursuant to product instructions and in a workmanlike manner.

3. Obligations of Purchaser. To make a Warranty claim, contact Us, at our principal address of 47912 Halyard Dr. Suite 100, Plymouth, MI 48170, 1-888-521-0510, identify the product by model number, and follow the claim instructions that will be provided. Any returned product that is replaced by Us becomes our property. You will be responsible for return shipping costs. Please retain your purchase receipt to verify date of purchase and that You are the original consumer purchaser. The product and the purchase receipt must be provided to Us in order to process Your Warranty claim.

4. Remedy Limits. Product replacement is Your sole remedy under this Warranty. We shall not be liable for service or labor charges incurred in removing or replacing a product or any incidental or consequential damages of any kind.

5. Assumption of Risk. You acknowledge and agree that any use of the product for any purpose other than the specified use(s) stated in the product instructions is at Your own risk.

6. Governing Law. This Warranty gives You specific legal rights, and You also may have other rights which vary from state to state. This Warranty is governed by the laws of the State of Michigan, without regard to rules pertaining to conflicts of law. The state courts located in Oakland County, Michigan shall have exclusive jurisdiction for any disputes relating to this Warranty.

Tighten all 5/8 grade 8 fasteners with torque wrench to 210 Lb.-Ft. (285 N*M)
Tighten all 5/8 grade 5 fasteners with torque wrench to 150 Lb.-Ft. (203 N*M)

Note: check hitch frequently, making sure all fasteners and ball are properly tightened. If hitch is removed, plug all holes in trunk pan or other body panels to prevent entry of water and exhaust fumes. A hitch or ball which has been damaged should be removed and replaced. Observe safety precautions when working beneath a vehicle and wear eye protection. Do not cut access or attachment holes with a torch.

© 2011 Cequent Performance Products      Printed in U.S.A. Sheet 1 of 2 9465N 9-10-11 Rev. B
Installation Instructions

1. The following guidelines must be followed before installation begins:
   - The hitch ball must be located along the truck’s fore/aft centerline.
   - The hitch ball centerline must be located above and forward of the rear axle of the truck.
   - Adequate clearance must be provided between the gooseneck trailer and the rear of the vehicle so that the gooseneck trailer does not contact any part of the truck during turning.
   - Adequate clearance must be provided between the forward corners of the gooseneck trailer and the cab of the truck.
   - Determine that the ball position and under vehicle supports do not interfere with any vehicle cross members, brake lines, electrical wiring, cables, fuel lines or vents.

2. Install under bed supports with (4) vertical 5/8” bolts in rails.

3. With hitch ball center marked on the truck, center punch and drill 3/16” pilot hole, recheck all clearances, then open the 3/16” hole with a 3 1/2” hole saw. File edges as needed.

4. Lift head into position.

5. Use the 5/8” conical toothed washers and hex nuts to install the head. Do not tighten completely at this time.

6. Align ball sleeve on head, with the 3-1/2” hole in bed and tighten 5/8” fasteners.

7. Using the U-Bolt slots as a guide, drill four 9/16” holes in the bed. These holes must be in a lower bed corrugations to limit the amount of U-bolt showing above the bed (see figure 6).

8. Touch up the drilled holes with paint.

9. Install the U-Bolts from the inside of the bed (see figure 2).

   **NOTE:** On Chevy/GMC 2500/3500 trucks, install the U-Bolt with the uneven legs on the driver’s side with the short leg forward to allow extra room for fuel tank and components.

10. From under the truck, install the 1/2” flat washers, U-Bolt springs, and 1/2” lock nuts (see figure 1 and 2). Tighten nuts so a minimum of 3 threads are showing passed the nuts.

11. With the ball in the stored position (see figure 5). Check for clearance between ball and truck equipment (i.e. differential, brake lines, electrical lines, and others) by measuring from axle up to rubber bumper stop and from ball to nearest item. If insufficient space is present, inform customer not to store ball in the head when carrying heavy loads. The axle to the rubber bumper stop distance should be less then the ball to nearest item.

   **NOTE:** If not installing head on Towing Products manufactured mounting kit, secure the hitch to your mounting system using the four holes in the front and back of the hitch and four 5/8” (grade 5) bolts (not provided). See figure 1. This is in addition to the four vertical bolts provided in the kit and will allow you to obtain the maximum head rating of 30,000 Lb GTW / 7500 TW Lb.

**AFTER SYSTEM INSTALLATION AND BEFORE TOWING:**

Connect trailer to the tow vehicle following coupler manufacturer’s operating instructions.
The coupler must be adjusted to provide about 6” of clearance between the bottom of the trailer nose and the top of the pickup bed sides.
Slowly back the trailer to a jackknifed position to the tow vehicle while checking to see there is adequate clearance between the gooseneck trailer and the rear of the vehicle. Also check to see there is adequate clearance between the forward corners of the gooseneck trailer and the cab of the truck. Slowly jackknife the truck and trailer in the opposite direction and check the clearances to the end of the truck and the cab.

**GOOSENECK MAINTENANCE**

- Use magnetic cover to keep assembly free of dirt and debris. Lubricate hitch ball monthly or as needed with heavy grease. Lubricate ball tube with heavy grease when ball is installed and/or removed. Lubricate locking pin monthly or as needed with spray-on penetrating oil. Check bolt torque monthly. Check equipment before towing for worn or damaged parts. **REPLACE WORN OR DAMAGED PARTS IMMEDIATELY.**
